Mainwin Summary

Mainwin Basics

- The mainwin is a text window, with no graphics, or other distractions.
- You can use it to do some serious computer work.

Variables

- You can exchange information with the users of your programs with the help of variables.
- Use the **input** command to get information from the user and place it into a variable.
- Print variables the same way you print text.
- Variables don't need to be defined before you can use them.
- Use the **+** symbol or the **;** symbol to add text and variables together.

Comments

- Add comments with REM at the start of a line.
- Use an apostrophe to add comments at the start of a line, or at the end of a line.
